Why the BCTN Portal?

The world of intermodal freight transport often involves a complex transportation chain with many different stakeholders. The inability to follow your containers can cause a lot of problems to your daily operation but also to your strategic position.

BCTN anticipated these problems by developing IT products that create value in container tracking and automation to reach a sustainable, scalable and streamlined operation.

Does your organization face one of the following problems?

- You have no clear insights in your booking process
- You are not able to instantly see the status of your containers
- You spend a lot of time creating manual daily, weekly or monthly reports
- You do not have an IT department or large budget to develop system integrations
- You work with the traditional (paper) CMR, hence a paper-based trail of your process
- You spend a lot of time administering, storing and retrieving CMRs

How does the BCTN Portal work?

The BCTN Portal has been developed as an easy and accessible information hub for your bookings and containers.

In fact, the BCTN Portal is a website that can be accessed anywhere, anytime, offering some handy tools to make your operation more intelligent. For instance, you can create new bookings, edit container information and generate custom periodic reports. Additionally, by using the container ready-announcements tool, you can operate more seamlessly with BCTN. Lastly, the E-CMR feature enables you to operate paperless, less fraudsensible and more scalable.
